Designing Play Spaces for Inclusion
Devilish details that make a difference

Prepared by
Mary Jeavons, Director

Presented by Sally Jeavons
Design for children’s play is a pressing issue
Children are dependent on the *qualities* of parks for experiences that affect their development.
Accessible, engaging, child friendly outdoor play spaces have never been more important.
Design matters more than ever before ... for everyone

- play and recreation
- physical activity
- social interaction and inclusion
- respite and retreat and
- engagement with nature
Swings and slide are important for vestibular development – but so much more is needed

- Design is often the missing ingredient. Most playgrounds are not designed – they are “provided”.
- However it is the detailed conscious selection and placement of elements and living components, that create a diversity of experiences and specific opportunities that provide value for play, and inclusion.
For every one to play you need: physical, sensory, social, imaginative play, graded challenges and access options

**Play**
1. movement, physical activity and risk taking
2. creative/sensory play
3. imagination/fantasy/role play
4. social interaction
5. nature and loose materials

**Access options**
1. Wheels and legs
2. Sit and stand
3. Front, and side
4. Up and under
5. Group and individual
Physical skills for many children need to be learnt, and practiced

- fitness, strength, resilience
- fine and gross motor skills
- sensory integration – balance, vision, hand-eye coordination, the position of the body in space
- confidence and mastery of challenging or unpredictable situations
Creative/ cognitive skills

- imagination and fantasy
- lateral thinking
- a sense of enquiry

Exploration of materials, their sensory qualities and their potential use in play
Social skills. These enable inclusion

- communication skills
- interaction with others
- interdependence
- confidence
- empathy
- tolerance
Children with a disability have the same need-less access and benefit more from play

1. How can you bring the environment/ adapt the setting to the child?
2. Can you adapt the equipment to create opportunities?
3. Can you enhance their choice, access or experiences through positioning, or specific support of the child etc. to create opportunities
Details make a huge difference for both play and inclusion, and the experience generally

- Getting to the park
- Access into and around the park
- Access to social spaces and amenities
- A choice of play activities once you are there- participation
Is the outing going to end in frustration and the pain of exclusion?

Information before the journey is critical.

A trip to a park may be out of the question without:

- a full fence
- accessible toilets, and
- a curb crossing for wheelchair access
Parking: options for different (side, rear) loading cars

Poorly designed car parks can be hazardous
Access to toilets and changing places

- Accessible design, space with adult-sized change bench
Getting into the park, and social spaces

- A seamless accessible path of travel
- Through gates, to social areas and shelter
- Activities for all the family – not just children
Beware the “accessible” design – that is not accessible, inclusive, or playful
There’s always more than one way to create access
All play spaces can be made accessible - to some central social activity

- One central social heart for social interaction – for all ages
Put social spaces and activity areas close by
Add accessible elements to equipment to provide social inclusion
Provide access to cubby / role play off central social areas
Choose from a variety of movement types—rocking, swinging, spinning etc.
Inclusive equipment for movement and risk taking: back support, hand holds, space for a carer to support.
You do not know on what senses a child may later depend – so provide sensory stimulation.
Materials for building and construction provide high play value
Pattern, texture  and detail in hard landscape
Maximise usability and inclusion on a ‘standard’ play structure

- Accessible steering wheel in the front
- Hand grips
- Manoeuverable surface
- Stair and handrail
- Choice of climbing challenge
- Social play under. More than one entry
Accessible interactive/tactile elements
Access under and space beside
Elements to manipulate and make music
Play with loose materials - can provide endless open ended options

looseness is a precursor to creativity
Multiple ways to access sand play

A choice of edge designs encourages access and participation.
Options for accessing sand play
Even in small scale spaces contact with nature can be created with vegetation and natural materials.
Less manicured corners invite exploration
Diversity, options and complexity provide greater play value and inclusion.

More diverse environments include more people.
Connections between play elements that enhance play between them

- A diversity of connected elements
- Here: cubbies and sand play, vegetation and sand
In summary

1. Play is an essential part of child development and vitally important to children with disabilities.

2. Today we rely on parks for most of our urban play experiences.

3. Design can ensure play value, and facilitate access to essential learning and fun experiences.

4. A diverse choice of play opportunities makes it more likely that everyone can find some way to participate, and children can maximise their development potential.

5. Inclusion requires a high level of attention to detail and multiple access options, and a combinations of elements suitable for people with different abilities.
Thank you. Questions?
